NORTHFRAME · WEBSITE DESIGN

A website concept for Amarillo Steel Fabrication & Machine

An independent design proposal: how your website could look on a desktop screen and on a phone.

- Sparks gather into "1972" when the page opens: the year you began serving Amarillo and the Panhandle
- Welding, cutting and forming, machine shop and custom builds as four clear departments
- A strip of photos of your own work and the shop on Crockett Street, with the phone one tap away

This is a design preview, not a live replacement for your current site. Services, history and photos come from your current website and would be confirmed with you before anything goes live. Only photos of your own work are used.
