

A website concept for Accurate-Tune

An independent design proposal: how your website could look on a desktop screen and on a phone.

- Call or text one tap away on a phone
- Two strings that beat against each other and come into tune as visitors scroll, with the sound on request
- Your prices, school district clients and your own piano photography up front

This is a design preview, not a live replacement for your current site. Texts, prices, clients and photos (your own) come from your current website and would be confirmed with you before anything goes live.
