

A website concept for GSI Geomatic Solutions

An independent design proposal: how your website could look on a desktop screen and on a phone.

- "Order a survey" and your phone number one tap away on every screen
- Contour lines that move behind the page and a survey crosshair that follows the cursor
- All nine survey types, your credentials and your service area clearly laid out

This is a design preview, not a live replacement for your current site. Texts, credentials, client quotes and photos come from your current website and would be confirmed with you before anything goes live. Client quotes are shortened and shown without personal contact details.
