NORTHFRAME · WEBSITE DESIGN

A website concept for Fluid Industries

An independent design proposal: how your website could look on a desktop screen and on a phone.

- A loud, colorful first screen with your candy purple wheel, the "Up to 20 ft" sticker and both buttons to call or email Wade
- As visitors scroll, a coat line rises through a grey photo of your teal differential until the real finish shows
- Powder coating with Prismatic Powders, Cerakote and hydro dipping on bright cards, the 20 ft promise and the shop on S. 4th St.

This is a design preview, not a live replacement for your current site. Finishes, wording and photos come from your current website and would be confirmed with you before anything goes live.
