

A website concept for Michael's PC Sales & Service

An independent design proposal: how your website could look on a desktop screen and on a phone.

- Your phone number and an appointment form one tap away on a phone
- A little repair game: visitors zap pixel bugs on a broken screen until it reads "All fixed"
- Repair, virus removal, networking, security and PC sales in one clear grid

This is a design preview, not a live replacement for your current site. Texts and logo come from your current website and would be confirmed with you before anything goes live. The pixel icons are drawn for this concept.
