

A website concept for KPS Electric

An independent design proposal: how your website could look on a desktop screen and on a phone.

- Your phone number one tap away on every screen
- A scroll animation where the lights switch on in a living room
- Your Master Electrician credentials and all services in one clear list

This is a design preview, not a live replacement for your current site. Texts, photos and business details come from your current website and would be confirmed with you before anything goes live. The opening animation is AI-generated from a photo on your current website.
