

A website concept for Kelly's Pool Care

An independent design proposal: how your website could look on a desktop screen and on a phone.

- A page that dives under water as visitors scroll: from the pool into the water, sinking deeper to the end
- Your three services, your team and both phone lines (North and South of Division St.) clearly laid out
- A free estimate one tap away on a phone

This is a design preview, not a live replacement for your current site. Images and business details come from your current website and would be confirmed with you before anything goes live. The pool scenes are concept visuals created for this design. The page is a design preview; calling and email links go to your real numbers and address.
