

A website concept for Garland Heating and Air Conditioning

An independent design proposal: how your website could look on a desktop screen and on a phone.

- A thermostat dial that turns as visitors scroll: heating, cooling and air quality, one after another
- Book Service Online and your phone number always in view, on a desktop screen and on a phone
- Residential, commercial and your 24/7 emergency service easy to find, with the special financing offer in a slim strip instead of a full-screen banner

This is a design preview, not a live replacement for your current site. Texts and business details come from your current website and would be confirmed with you before anything goes live. The living-room image is an AI-generated concept visual, not a photo of your work. The logo is from your current website.
